HTML Fundamentals

Understanding HTML Fundamentals

THE BACKBONE OF WEB PAGES

HTML, or HyperText Markup Language, is the standard language for creating web pages. It defines the structure and content, acting as the **skeleton** of a website. Through HTML, developers can structure text, links, and images effectively.

HYPERTEXT MARKUP LANGUAGE (HTML)

Understanding Basic HTML Structure

HTML: ROOT ELEMENT

The **html tag** is the foundation of any web page, indicating to the browser that this is an HTML document.

HEAD: METADATA CONTAINER

The **head tag** contains important information about the web page, such as the title, character set, and links to stylesheets.

BODY: VISIBLE CONTENT

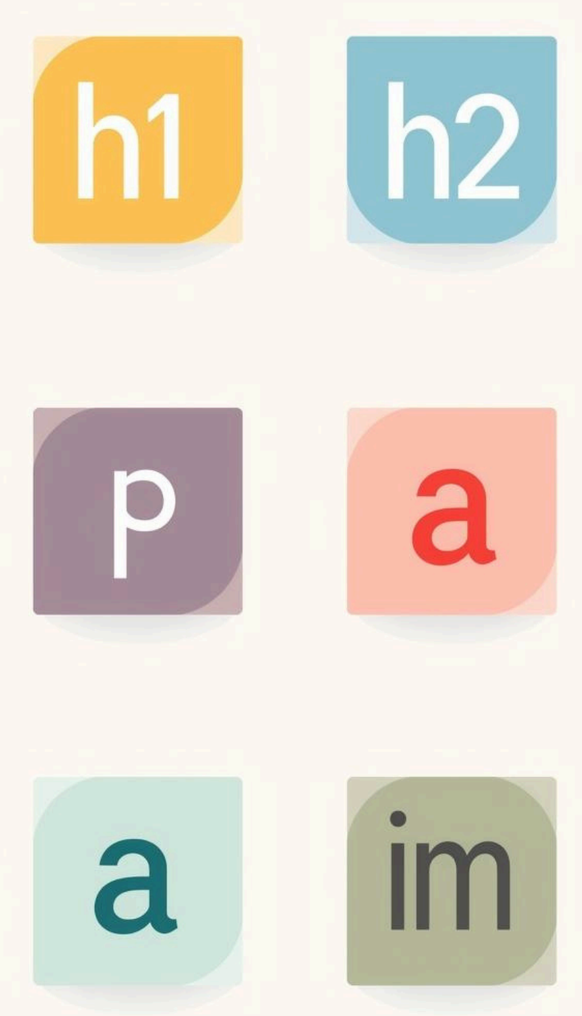

The **body tag** holds all the content that users see, including text, images, and other media displayed on the web page.

Fundamental HTML Tags for Web Content

ORGANIZING YOUR WEB PAGE

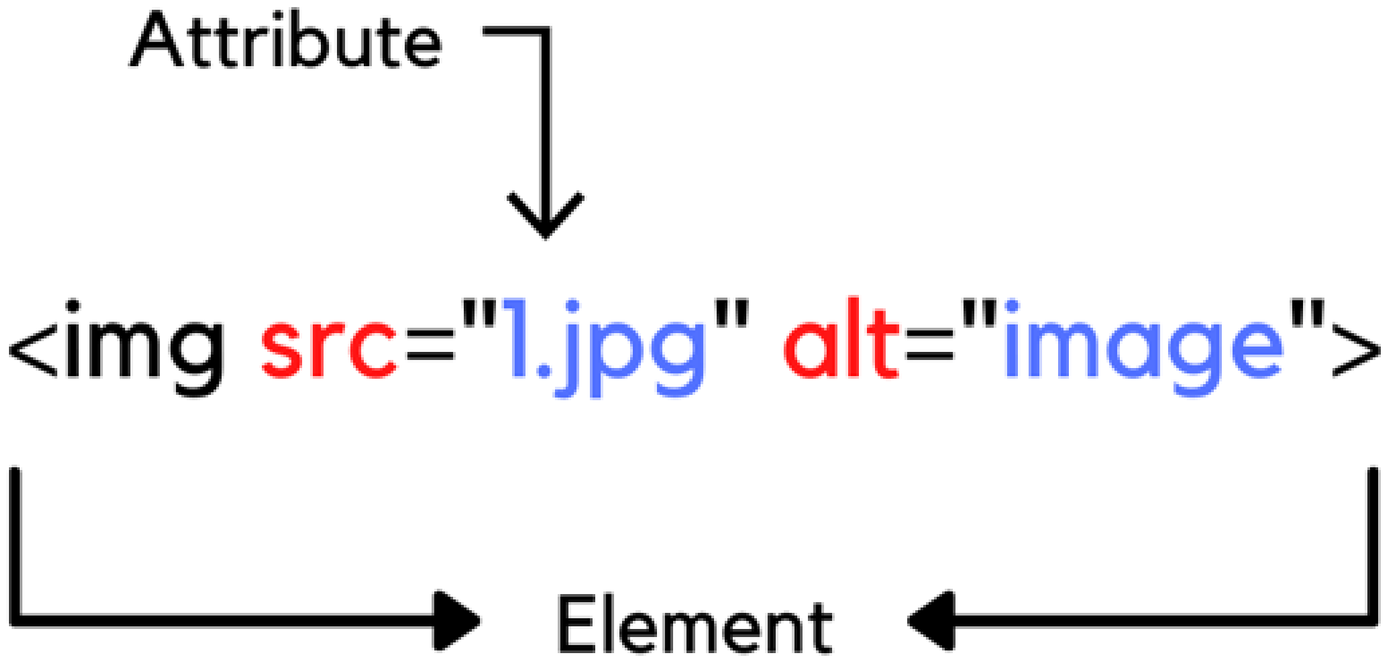

HTML provides essential tags to structure content effectively, helping with organization and readability. Key tags include headings, paragraphs, links, and images.
